# AGE DEFYING ULTHERAPY

ARE YOU A mother of a bride-to-be? We all need a little extra loving when we are prepping for the big day! Ultherapy is a non-surgical and safe procedure which can be used to improve lines and wrinkles as well as to perform brow, neck and chin lifts – leaving skin at its photo-ready best.

Ultherapy uses ultrasound technology to deposit focused energy simulating the body's natural production of collagen and elastin in the deep tissue layers.

Over time, this process will enable skin to firm, lift and tighten.

As no scalpels, needles or toxins are involved in the procedure, there is no disruption to the skin and no downtime is required.

According to RealSelf, the world's largest personal review website for cosmetic treatments, Ultherapy is rated higher than other skin tightening modalities.

The results last about 12 months following treatment. Follow-up treatments assist with the ageing process and are recommended every 12 to 24 months to maintain results.
